Foreword

Expansion of knowledge in radiology has accelerated over the past few years, with many new insights gained from continued research and experience. It is appropriate to start the new decade with an updated five-year index covering 1976 through 1980 and to make it available to all subscribers in place of the index covering only the current year. The Board of Directors has supported this effort to assist radiologists in identifying the relevant medical literature by the early production and wide distribution of *Cumulative Index IX*.

Special recognition is due to Stuart J. Birkby for his work on the index.

William R. Eyler, M.D., Editor

Introduction

Cumulative Index IX of Radiology encompasses the material in volumes 118–137 (January 1976–December 1980), including abstracts of selected papers from 80 other medical journals, book reviews, editorials, letters to the editor, and obituaries. Also indexed are major articles published in the American Journal of Neuroradiology, American Journal of Roentgenology, Clinics in Diagnostic Ultrasound, Radiologic Clinics of North America, Seminars in Nuclear Medicine, Seminars in Roentgenology, and Seminars in Ultrasound.

This cumulative listing is divided into an author and subject index. All authors of any single paper are listed. The title and location of a paper are found under the name of the primary author. Co-authors are also listed individually but are cross-referenced to the primary author's name. In the subject index, terminology is organized so that papers dealing with organs and regions of the body are listed under the name of that organ or region, with the name of the disease or radiological technique used listed as a secondary heading. Exceptions have been made in

cases of extensive study of a disease of a particular organ, such as **Brain neoplasms** which permits several subheads which would not be possible under **Brain, neoplasms**. Papers dealing primarily with general diseases, modalities, or other miscellaneous topics appear under the name of that disease, modality, or topic. There are also many cross references to synonyms for terms that are too specific or may create repetitious listings if used as a separate heading.

In the author and subject indexes, multiple listings under a single heading are alphabetized according to the first word in the title of the paper (except for the articles, "a," "an," and "the"). Volume numbers appear in boldface type, followed by the first-page number of the paper, and the year of publication. In most cases, the cumulative index reflects the spelling and punctuation of titles and authors' names as used in the journals.
